## HYBRID CONFERENCE

ON

# INDIA'S NEW DATA PROTECTION LAW AND THE GDPR: IMPACT ON BUSINESS IN FRANCE AND INDIA

Data Protection can be complex for international companies.  
Five years after the implementation of GDPR, the enactment of India's new data protection law creates a distinct legal regime in India.

It is crucial now to assess the current state of data protection and see how it can impact doing business in and between the two countries.

This conference aims to delve into similarities and differences, data transfer mechanisms, compliance issues, and potential changes that businesses may need to make.

- How does India's new Digital Personal Data Protection Act affect businesses in India and France?
- How to enable cross-border data transfers when using data processors based in India and/or France?
- How to anticipate and react to data breach risks regarding the Digital Personal Data Act and the GDPR?
- What are the penalties of the Digital Personal Data Act and of the GPDR?
